

Can you see the flaw in their thinking? The truth is not that hard to see. The problem is that it is difficult to get people to see the truth when their salary depends upon not seeing it!

The flaw so many have made is they have confused money with wealth (apples, cars, clothes, chickens, etc). And hardly anyone in the world dares to correct that error. But think about it: You can't eat money, it is just paper. It will not keep you warm. It is only useful if you can trade it for something else.

## A NEW MOTIVATION IS WHAT WE NEED

What we need is a new motivation. We need a new reason for doing what we do.

We believe the goal must be total love... for all mankind, if we are going to solve climate change and the rest of the world's problems.

Our aggression must be directed against the lies and deceptions that are destroying the world (but not against the people who tell

and believe the lies). Violence won't solve any of our problems. We must overcome those who promote the lies and deceptions through love and non-violence.

What we are talking about is more than nice words for a political platform or a new religion. We are talking about a community or a new nation built upon volunteers who

refuse to let money be the motivation for their daily living. People who actively seek every day to use all of their skills, energy, and resources to express love for others.

A few of us have begun this volunteer lifestyle, working for love rather than for money. We have given up everything we own and we are prepared to die for love. We have already found that such commitment pays dividends in terms of inner fulfillment, increased awareness, and a zest for life. We believe we've hit on the answer to the world's problems and the REAL solution to climate change.

In time we hope to see this spirit of love spread and affect others. Real love is much more than emotional thrills; it is capable of ushering in a whole new world order. In fact, we've found it is more powerful than life itself!

Still, talk is cheap. The world has plenty of sermons – it needs more samples! The people sharing this book are doing their best to follow the example of the wisest man to ever live: Jesus Christ.

But don't confuse us with modern Christianity – we're not the same. And if you're curious to know why we say that, please write to the email address below. Thank you.

# THE GROWING CLIMATE CRISIS AND THE SOLUTION

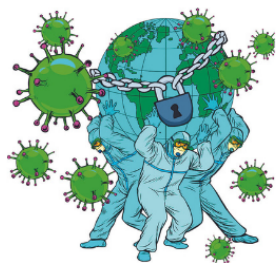

**BEFORE** **AFTER**

Climate change is one of the biggest problems facing the world today. But, in order to solve climate change, we need to understand its cause.. we believe that the root cause of climate change is human greed.

In 2020, something strange happened, and it brought me hope. During the COVID-19 pandemic, the global economy took one of its biggest hits. Many factories and businesses shut down, and the world went into lockdown.

This happened while a huge global effort was being carried out to protect the lives of millions of vulnerable people from Covid-19. Countries, governments, and individuals chose to sacrifice the economy, temporarily, leaving millions of people without paying jobs.

During that time some people started to believe that the end of the world was near. But, despite those fears, something miraculous happened to our environment. Emissions of carbon dioxide and other greenhouse gases plunged 4.6 percent in 2020, as lockdowns in the first half of the year restricted global mobility and hampered economic activity. We demonstrated that we can stop, and even save, the earth from climate change and restore the environment, **if** we so choose.

After witnessing this, I saw an economic revolution on the horizon. A new way of living. But in order for this economic revolution to work, we need to practice the solution through the way we live.

**WE WORK FOR FREE!**

What we need is a world where society operates without money. If you look at nature, the trees, animals, and other forms of life, they are all able to live in harmony with one another without money. So why can't we do the same? We are the only species on the entire planet to be directly responsible for climate change. That alone should be enough evidence that we are the ones who need to change.

## **THE DARK TRUTH ABOUT THE GLOBAL ECONOMY**

We need to start thinking outside of the realm of profits; if we continue with the way we are living we are, to use a technical term, totally screwed. It's time for a civilization-wide wake-up call! We need an entirely new economic model that runs off of volunteer work rather than money. The warnings are all around us and the time to act is now.

The problem with our current economy is that it says you can make "wealth" (earn profits) by destroying resources. For example, grocery stores around the world throw away billions of pounds of food every year rather than give it away for free because free food could hurt their profit margins. It is estimated that we produce 4 billion tons of food every year - more than enough to feed the 7.5 billion people who live on the planet - yet a large proportion of all food produced gets wasted. It is estimated that between 1.2 and 2 billion tons of food (i.e. between 30-50 percent of all food produced) is wasted every year.

Ask yourself this question: is it reasonable for the economy to destroy billions of tons of food while 800 million malnourished people exist in the world?

**ABSOLUTELY NOT!**

It's clear that our economic system is at war with the Earth. The problem we face is that our current economic model needs to continue to consume in order for it to work. But what our climate needs in order to avoid collapse is a complete disconnect from the economy so that it can recover. We need to change the current system so that it isn't at war with nature or we won't have a planet to live on.

We can either let the climate collapse destroy us, or we can do everything we can to change our current economic system to avoid that fate. The choice, as always, is up to us.

## **A RADICAL WAY OF LIVING TO SOLVE CLIMATE CHANGE**

If we stopped working for money and worked voluntarily, using the technology and the resources that are now available to us, we could stop the climate crisis, end poverty, and

enjoy an amazingly high standard of living. But the "experts" say we shouldn't do this... Why?

Because the "experts", aka the economists, work for the rich and not for the poor. They are only interested in higher profits... even if it means destroying the Earth. Businessmen and economists say that they can increase the wealth of their country by destroying half of their crops and then tripling their prices. Half the population may go hungry, but they will still argue that what they did was "good for the economy."
